5TR5A

Selenium Flex System consists on a three-way 5" 1/4 pair of speakers developed to reproduce the whole range of audio frequencies: low, midbass and high frequencies. Whenever used with the right adaptor (if necessary), the three-way is the most indicated loudspeaker to be used in the original car places, avoiding any further work to assemble it. It presents the followings features:

- Polypropylene injected cones provide a bold appearance.
- The rubber surround, without a mechanical break, allowing a linear displacement in both directions assuring low distortion.
- Copper voice coil, with the copper bobbin for a better heat sink and dumping action, as well as special resins to support high temperatures.
- Steel stamped frame/basket, with a reinforced design and black epoxy finishing.
- Dynamic tweeter with PEI (Polyester imide) diaphragm/dome and barium ferrite magnet assure a high performance product.
- The Piezoelectric tweeter has high efficiency at high frequency reproduction.
- 50W Musical program power is a big jump from the original low power speakers.
